Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

detecting or inhibiting human telomerase, e.g. for treating cancers, contraception, immuno-suppression or treating infection

Claim 11; Page 65; 80pp; English.

polynucleotide(s) anti:sense to human telomerase - used

New polynucleotide(s) anti:sense to human telomerase - used for detecting or inhibiting human telomerase, e.g. for treating cancers, contraception, immuno-suppression or treating infection

Claim 11; Page 65; 80pp; English.

Sequences shown in AAV41169 to AAV41181 represent antisense
oligonuclectides to the RNA component of human telomerase (HTR). These
antisense oligonuclectides specifically hybridise to a nucleotide
sequence within an accessible region of the hTR, but that does not
component of a sequence within the template region of hTR. These
component of human telomerase in a sample. This is useful for diagnosing
cancer (especially neuroblastoma, bladder, colon and prostate cancer),
and providing prognosis for a cancer patient. The inhibitor of
cancer (especially neuroblastoma, bladder, colon and prostate cancer),
oligonuclectides can inhibit the telomerase activity level in a cell by
interfering with transcription of the RNA component, decreasing the
colymerase activity of telomerase. These antisense oligonuclectides can
be used for inhibiting telomerase. These antisense oligonuclectides can
be used for inhibiting telomerase activity in both cultured cells and in
cells in vivo. They can be used in therapeutics for treating or
contenting cancer, for contraception or sterilisation, for
immune system, e.g. a specific subset of T-cells, in
contininamatory, therapies or for treating infections by, e.g. yeast, parasites or fungi

senescence. Recombinant expression vectors comprising a recombinant polymucleotide corresponding to a polymucleotide in a human GCG gane, are useful for altering senescent gane expression. The vectors and host cells comprising the vectors are useful for identifying agents that prevent or modulate senescent gene expression. The polymucleotides are useful for producing the protein, pGCG and nucleic acid derivatives. The proteins encoded are useful for raising antibodies specific for pGCG, which are useful for raising antibodies specific for pGCG, which are useful for isolating pGCG, and for detecting cells comprising pGCG in complex cell mixtures. The characterization of the polymucleotides enable the identification of therapeutic agents that identify and distinguish between young and senescent cells. This enables treatment of aging diseases induced or exacerbated by cellular senescence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to three polymorphic variants of a rat transcriptional regulatory factor Elf-1 (AAB03190-B03192) and nucleic acids encoding them (AAA61645-A61647). The invention also encompasses the use of Elf-1 for regulating the transcription of a gene in an expression vector. The CDNA encoding rat Elf-1 variant #1 (AAA61645) was isolated using PCR primers (AAA61648-A61649) based on mouse Elf-1 CDNA, and the rat Elf-1 variant #2 and 3# CDNA8 (AAA61646-A61647) were subsequently isolated. The Elf-1 CDNA and protein sequences are potentially useful for the prevention and treatment of immunological and allorgic diseases mediated by Elf-1. Sequences AAA61648-A61649 represent mouse Elf-1 PCR primers used in an exemplification of the invention to isolate rat Elf-1 variant #1 CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A transcription regulating factor Elf-1 cDNA and its polymorphism

This method involves administering a soluble type-II IL-1 receptor protein in an amount effective to bind to IL-1 and prevent its binding to cell-surface IL-1 receptors. The process can be used for treating alloantigen-induced rejection of transplanted tissues or organs, graft-versus-host disease and autoimmune dysfunction dependent upon the activation of T cells against self antigens, selected from rheumatoid arthritis, diabetes mellitus or multiple sclerosis.
                                                                                                                                                                                                                                                               Type II interleukin-1 receptor; IL-1R; immune response; inflammation; regulation; soluble; cell surface receptor; treatment; alloantigen; fissue; organ; rejection; transplant; graft-versue-host disease; human; autoimmune dysfunction; T-cell activation; self antigen; primer; rheumatoid arthritis; diabetes mellitus; multiple sclerosis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Regulation of interleukin-1 mediated immune or inflammatory response in mammal - comprises administering soluble IL-1 receptor protein, used in treatment of e.g. graft versus host disease and multiple

Arraying genome clones WPI; 2002-144136/19.

```
The present invention describes a method of arraying genome clones. The method comprises: (a) clones of the genomic libraries contained in miltiwell plates numbered for discrimination are mixed in each of the miltiwell plates; (b) a primer designed based on the chromosome marker multiwell plates; (b) a primer designed based on the chromosome marker sequence is added to the mixture to carry out an amplification reaction; (c) a signal corresponding to the marker is detected from the resultant amplified product to specify the discrimination Nos. of the multiwell plates containing the clones having said marker sequence; (d) the order of the maximum in the specified discrimination Nos. to array the multiwell classified by the miltiwell plates of the specified discrimination Nos. succeed to discrimination Nos. are mixed respectively in each wells of longitudinal and lateral directions; (f) the mixed clones are cultured and the resultant cultures are amplified products; (h) the clones in the multiwell plates are specified from the amplified products; (h) the clones in the multiwell plates are specified from the detected result; and (i) the clones are constituted as the positions on the chromosome and arrayed. The mixed clones is the mixed of the constituted as the positions on the chromosome and arrayed. The mixed constituted as the positions on the chromosome and arrayed. The mixed mixed the constituted as the positions on the chromosome and arrayed. The constituted as the positions on the chromosome and arrayed. The constituted as the positions on the chromosome and arrayed. The constituted as the positions on the chromosome and arrayed. The constituted as the positions on the chromosome and arrayed. The constituted as the positions on the chromosome and arrayed. The constituted as the positions on the chromosome and arrayed. The constituted as the positions on the chromosome and arrayed. The constituted as the positions on the chromosome and arrayed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PCR primers for human chromosome 1p36-35 DNA, and ABL45323 to ABL45634
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

                                                                                                                                                                                                                                                                                                                                   This invention describes novel microsatellite markers (MSM), based on the hypervariable genomic regions of rye (Secale cereale) and of plants from the tribes Triticeae and Poeae. MSM, which are new genetic markers for rye and closely related species, are used for genetic analysis and in breeding programs. Typical applications are in DNA fingerprinting; identification of varieties; detection of self and cross pollination; characterization of cytoplasmic lines, and genetic mapping (of mono- or poly-genic traits). MSM show a higher degree of polymorphism than known markers (both within and between different rye varieties and lines); can be detected by polymersase chain reaction, so that even very small samples may be analyzed, and generate many alleles per marker locus. AZZ3387-ZZ3886 represent the microsatellite marker PCR primers

This invention describes Secale cereale microsatellite markers based on hypervariable genomic segments of Secale cereale and plants of the tribicae and Poeae. The microsatellite markers comprise a simple sequence repeat (SSR) marker as sequence tag site (STS), defined by two specific S. cereale defined primers, of mean length 18-26 bases and flanking the microsatellite sequence (MSS). Such markers are useful for genetic analysis of rye, triticale and other species of the tribes Triticeae and Poeae, e.g. for DNA fingerprinting; identification of varieties; detecting self or cross fertilization; studying similarity and meatedness; characterization of cytological lines, or generally any sort of gene mapping. Particularly, they are useful for genetic mapping and marking of mono- or poly-genic traits, selection and evaluation of varietal purity or checking culture stages (particularly in hybrid culture methods), purity of propagative materials, success of culture and continued and components in populations and published. MAX36902-X36965 represent PCR primers used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Intercellular adhesion molecule 6; ICAM-6; drug screening; therapy; intercellular adhesion; inflammatory process; PCR primer; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                Microsatellite markers derived from the genome of .rye, useful for genetic mapping as markers of monogenic or polygenic traits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

burners AAF80328-30 were used to amplify cDNA encoding a human G-protein coupled receptor designated ISS4. IGS4 exists in two polymorphic forms, IGS4A and IGS4B. The IGS4 receptors and IGS4C polymorphic forms, IGS4A and IGS4B. The IGS4 receptors and IGS6C polymorphic forms. These diseases include peripheral nervous system disorders of system, psychiatric and central nervous system disorders of system, psychiatric and central nervous system disorders of system, psychiatric and central nervous system disorders (e.g. schizophrania, episodic paroxysmal anxiety, phobia, Parkinson's disease, migraine, episodic paroxysmal anxiety, phobia, Parkinson's disease, migraine, episodic paroxysmal anxiety, phobia, Parkinson's disease, migraine, episodic paroxysmal anxiety, phobia, Parkinson's disorders (e.g. inflammatory bowel disease or motility disorders), costeoporosis, inflammatory bowel disease or motility disorders), costeoporosis, inflammations, infections (e.g. bacterial, fungal, protozoan or viral), pain, cancers, immune disorders, allergies, sepsis or syncological disorders of the nervous system, including the effective with regard to disorders of the nervous system, including or system, cardiovascular system, sepsies or immunological disease. The IGS4 polynucleotides genitourinary system, or immunological disease. The IGS4 polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AA173060 to AA179867 represent isolated human polymorphic polynucleotide sequences (I), which contain single nucleotide polymorphisms (SNPs). AAM51314 to AAM53129 represent peptides related to human polymorphic polymucleotide sequences. The sequences can be used in gene and protein therapy, and in vaccine production. (I) and the polypeptides encoded by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, single nuclectide polymorphism; SNP; genome; gene therapy; protein therapy; vaccine; probe; diagnostic assay; detection; quantitation; restorative therapy; polymorphic; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New G-protein coupled receptors and the polynucleotides encoding them, useful for preventing, ameliorating or correcting nervous system disorders, cardiovascular diseases, dyslipidemias, inflammations, pain
                                                                                                                                                                                                                                                                                                              involving intercellular adhesion, e.g. in inflammatory processes. The products can also be used for detection, diagnosis and the production of transgenic animals. PCR primers AAX36170-73 were used in the course of the invention.
                                                                                                                                                                                                                                    The specification describes an intercellular adhesion molecule (ICAM)-6 polypeptide. The ICAM-6 polypeptides and polynucleotides can be used for drug screening and developing products for therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PCR primer for cDNA encoding the G-protein coupled receptor IGS4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                           New isolated intercellular adhesion molecule-6 used for, e.g. diagnosis of inflammatory processes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 24;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Venema J;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of polymorphic polypeptides.

For example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of polypeptides by expressing inactive proteins or to supplement the patients own production of polypeptide. Additionally, (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The polypeptides encoded by (I) may be used as antigens in the antibodies may also be used as diagnostic expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of polymorphic polypeptides in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAI73060 to AAI79867 represent isolated human polymorphic polymucleotide sequences (I), which contain single nucleotide polymorphisms (SNPs).

AAM53114 to AAM53129 represent peptides related to human polymorphic polymucleotide sequences. The sequences can be used in gene and protein therapy, and in vaccine production. (I) and the polymeptides encoded by them may be used in the prevention. (I) and the polymeptides encoded by associated with inappropriate expression of polymorphic polypeptides. For example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of polypeptides by expressing inactive proteins or to supplement the patients own production of polypeptide. This invention describes a novel factor VIII polypeptide (I) with factor VIII: Cactivity which has a modification in at least one of the A3, C1 and/or C2 domains of the light chain that modifies binding affinity to low density lipoprotein receptor-related protein (LRP). Independent claims are also included for the following: (I) DNA (II) that encodes (I); (2) an expression vector containing (II); (3) transformed cells and their descendants containing (II); (4) recombinant production of (I) by culturing cells of (C); and (5) pharmaceutical composition containing a factor VIII molecule (Ia) with factor VIII:C activity plus an LRP and (S) pharmaceutical composition containing a cativity. (I) has reduced affinity for LRP, a receptor involved in clearance of factor VIII from the blood. (I), optionally formulated with an antagonist of LRP, is used for treatment of coagulation disorders, an antagonist of LRP, is used for treatment of coagulation disorders, capecifically hemophilia A. It may also be used to treat subjects with disorders of the thrombotic or fibrinolytic systems, e.g. before, during or after surgery. Nucleic acid that encodes (I) can be used
                                                                                                                                                                                                                                                                            ö
complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The polypeptides encoded by (1) may be used as antigens in the production of antibodies specific for polymorphic polypeptides. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of polymorphic polypeptides in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Factor VIII; light chain; LRP; gene therapy; antihemophilic; blood; low density lipoprotein receptor-related protein; coagulation disorder; thrombotic system; fibrinolytic system; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New modified form of factor VIII, useful for treating hemophilia, has altered binding to low density lipoprotein-related protein, resulting in extended in vivo half-life -

similarly in gene therapy. The light chain modifications reduce clearance of factor VIII protein from the blood, resulting in longer in vivo and—life (particularly at least 90% greater than wild type) and increased stability, in vivo or in vitro. The modifications do not adversely affect procoagulant activity. This sequence represents a primer used in the construction of the plasmid pC2-m9#518 which contains the Factor VIII light chain C2 region which is described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC10010-ABE199989, ABF00010-ABF99989, ABF00010-ABF99989 and NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at

Sequence 110, Application US/09898779
Fatent No. US20020106657A1
GENERAL INFORMATION:
APPLICANT: Kent D. Taylor (Inventor)
APPLICANT: Maren T. Scheuner (Inventor)
APPLICANT: Maren T. Scheuner (Inventor)
APPLICANT: Jerome I. Rotter (Inventor)
APPLICANT: Huiving Yang (Inventor)
TITLE OF INVENTION: Genetic Test to Determine
TITLE OF INVENTION: No. US20020106657A1-responsiveness to Statin Drug Treatment
FILE REFERENCE: 18810-82302
CURRENT APPLICATION NUMBER: US/09/898,779
CURRENT FILING DATE: 2001-07-03
                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

is Sequence 12, Application US/08961888

sequence 12, Application US/08961888

patent No. US20010016351A1

GENERAL INFORMATION:

APPLICANT: Padgett, Kerstien

APPLICANT: Sorge, Joseph

TITLE OF INVENTION: No. US20010016351Alel Vector For Gene Expression

TITLE OF INVENTION: In Prokaryotic And Eukaryotic Systems

NUMBER OF SEQUENCES: 40

CORRESPONDENCE ADDRESS:

ADDRESSEE: Howrey & Simon

STREET: 1299 Pennsylvania Avenue, N.W.

CITY: Washington

STATE: DC

CONDITY: Washington

STATE: DC

COMPUTER READABLE FORM:

MEDIUM TYPE: Diskette

COMPUTER: Is DoS

SOFTWARE: FatSEQ for Windows Version 2.0

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/961,888

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Telomerase Gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PCT-USO3-04088-530/C

sequence 530, Application PC/TUSO304088

sequence 530, Application PC/TUSO304088

sequence 530, Application PC/TUSO304088

sequence 530, Application Plantage in inc.

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Beigelman, Leonid

TITLE OF INVENTION: RNA Interference Mediated Inhibition of Telomerase TITLE OF INVENTION: Expression Using Short Interfering RNA (siNA)

FILE REFERENCE: 02-708-A (400/080)

CURRENT APPLICATION NUMBER: PCT/USO3/04088

CURRENT PILING DATE: 2003-04-28

PRIOR FILING DATE: 2002-07-17
